

Marine Mammal Match: SEALS

PATTERNS • ENERGY & MATTER • CAUSE & EFFECT • SCIENCE & ENGINEERING • LITERACY

Do you look different now versus when you were a baby? In what ways have you changed and grown? Just like humans, marine mammals have a lot of growing up to do before they can live on their own. They live relatively long lives, which gives them a lot of time to grow to a large size and learn how to live in the ocean. A *LIFE CYCLE* is how long an animal lives, and how it changes throughout its lifetime.

Head to [Sciencing](#) to learn more about the life cycle of a harp seal. Then, use [NOAA](#) to do some research about the seals found in the Gulf of Maine and fill in the life cycle facts below:

Grey Seal

Life Span:
