

# Photosynthesis

STEM • ART & NATURE • GET OUTSIDE!

Plants and algae make their own food during photosynthesis and it is a process! Plants take in sunlight, water and carbon dioxide to produce the sugar they need to survive, while also releasing oxygen into the air. Listen to this [Photosynthesis Song](#) to learn more!

Once you are confident with the photosynthesis process, use the word bank to fill in the diagram below.

## Word Bank:

(not all words will be used)

- Carbon Dioxide
- Sunlight (Energy)
- Oxygen
- Dirt
- Water
- Chlorophyll

**Poetry Challenge:** Can you create your own song, rap or poem? Enter our poetry challenge and share your work with the Seacoast Science Center!

### GUIDELINES:

Poetry Topic - Must be a topic you learned about on the choice board (i.e. phytoplankton)

Submission - send final product to the Seacoast Science Center at [registrar@sscnh.org](mailto:registrar@sscnh.org)
