

First Signs of Spring Scavenger Hunt Challenge

Find new growth
on the ground

Look for
a bird's
nest

Watch a
squirrel dig
for food

Spot a
Canadian
Goose

Feel a slimy
slug

Listen for the
song of an
American Robin

Gently feel
a budding
blossom

Observe how
an insect
walks

Smell a
bright
flower

Step in
Mud

Thank you for participating in the Seacoast Science Center's outdoor challenge

Did you notice a sign of spring that wasn't a part of
the challenge?

Draw your additional observation(s):

Nature is a valuable classroom we all can learn
from, whether we are exploring our backyards, our
communities, or New Hampshire's State Parks!

Thank you for participating in the Seacoast Science Center's outdoor challenge

Nature is a valuable classroom we all can learn from, whether we are exploring our backyards, our communities, or New Hampshire's State Parks!

The Seacoast Science Center strives to instill a commitment to conservation through the lens of our special location at New Hampshire's Odiorne Point State Park, a unique coastal environment that offers a gateway to understanding the relationship between people, our local habitat, and the world at large.

Here, visitors have a rare opportunity to experience first-hand the earth's many different ocean and coastal environments including sandy beaches, rocky shores, tidal estuaries, diverse freshwater habitats, and woodlands.

Come explore!
