

Sharks!

Shark skin is made up of dermal denticles, shown in this closeup of great white shark skin

Sharks are elasmobranchs, which makes them closely related to rays and skates, such as these little skates.

The dwarf lanternshark is the smallest shark, growing only 6-8 inches long. They are also bioluminescent!

The whale shark is the biggest shark, up to 60 feet long! They are filter feeders, with a diet of mostly plankton.

Many sharks have multiple rows of teeth in their mouths, with new teeth moving forward as teeth are lost.

The shortfin mako shark is the fastest shark. It can swim up to 45 miles an hour!
